

October 11th, 2022

I have been utilizing the free tutoring at CMC all this semester, and without a doubt, I will say that Joyce has been instrumental in supporting me, allowing me the freedom to excel at math, and providing me with a more suitable mindset and the means to solve problems. In addition, she constructs straightforward, succinct, and unvarnished points that assist me daily to flourish and alleviate myself and others of the burden it would form. Without her, I would be lost, and I can't envision a justification for not going to her when I'm bumbling my way through yet another math problem that I do not understand.

A handwritten signature in black ink, appearing to read "TAD HEW". The signature is written in a cursive, somewhat stylized font. The first part "TAD" is written in a larger, more prominent script, while "HEW" is written in a smaller, simpler script. A long horizontal line extends from the end of "HEW" across the page.

To whom it may concern,

I am Mason Voyvodic, a current mechanical engineering student at Colorado School of Mines. Last year, I was at CMC and took Joyce Treulieb's Calculus II and Calculus III classes.

The passion for math that Joyce brings to her classes is truly unique. She loves the math she teaches, as well as sharing it with her students, and brings a deep understanding to class. She can answer any question asked, and give you the real reasons behind why we solve math problems the way we do.

Joyce also makes her classes fun. The enthusiasm and passion she brings spreads to her students. Students in her class want to learn the material just as much as Joyce wants them to. Because of Joyce's contagious enthusiasm, her students attend class more than I have seen in almost any other math class I've taken. They ask questions, attend office hours, and meet outside of class just to talk about math, none of which would happen without Joyce's passion.

Joyce also loves to help her students. I started her Calculus II class having sustained a very serious concussion just two weeks earlier and wasn't sure if I was going to be able to complete the semester. Joyce went out of her way daily to ask how my head was doing, adjust the lights and do anything else she could to help. She was also happy to meet outside of class to go over topics and prepare for tests. I really don't think I would have been able to complete Calculus II that semester without her help.

Taking two of Joyce's classes last year prepared me very well for Colorado School of Mines. This semester, I have felt more prepared for my calculus-based physics classes than most of my peers who took Calc II and III at Mines. I have been able to explain to them the math behind complex physics problems because of what I learned in Joyce's classes.

Sincerely,
Mason Voyvodic

Treulieb, Joyce

Subject: Letter of appreciation(?)

In complete honesty, I was very intimidated by the idea of college-level math when I came to CMC in my first semester. My advisor pointed me in the direction of Joyce's class, indicating that she would be an excellent teacher for me. They were right! Joyce helped me immensely in remembering the core parts of Algebra that we studied in her class, and I was able to follow along in her class very well. I appreciate her teaching style, and the conversations we had in the lulls of class, as well as after and before class would begin were very informative and entertaining! In total Joyce is a professional and excellent educator and her class was a huge confidence boost in my ability to do math well, as well as understand new, and perhaps intimidating, mathematical material.

Cheers!

Ben M :)

To whom it may concern:

It is my pleasure to write this letter of recommendation for Professor Joyce Treulieb for the position of _____.

My name is Olympia Jett, I am a sophomore and honor student attending Colorado Mountain College in Steamboat Springs, Colorado. During the spring semester of 2022, I attended Professor Treulieb Math 120, Math for Liberal Arts course. I had always been a student who struggled, particularly with math, but Professor Treulieb not only made the class incredibly enjoyable, I also learned quite a bit and was able to excel throughout the course. I always looked forward to attending her class, as well as the tutoring sessions that she offered to all of the students. Tutoring was a wonderful resource that she provided, as it seemed that she always aspired for all of her students to succeed and put aside the time to help students achieve their goals. I would highly recommend her class to any person, and if my degree were to require another math course, I would absolutely make sure that it was one of professor Treulieb.

Joyce Treulieb is an incredible asset to any team, and will contribute valuably in any and all of her future endeavors. For these few reasons, and many more, I would thoroughly recommend professor Treulieb.

Please feel free to contact me if you have any questions.

Best wishes,

Olympia Jett

To: Treulieb, Joyce <jtreulieb@coloradomtn.edu>

Thank you

Joyce,

I wanted to thank you for your amazing instruction over the last two semesters. You may remember that I took college algebra with you last term. As the pandemic was surging and classes were online, I was concerned about taking these courses, but your instruction has made it possible for me to have a working understanding of mathematics up to this point. Having started with very weak competencies in mathematics, I was unsure of my capabilities, but with your instruction, and countless hours spent with tutors, I can say that my confidence and interest in the subject have surged. My sincerest gratitude for your continued efforts in teaching these courses in these difficult times. May you continue to enrich the knowledge of future CMC students of math.

-Ethan
